Company Description

DroMii is a GeoAI company specializing in spatial information and AI-based water pollution management. Its flagship, K-AQUAS, integrates satellite (Super Resolution) and drone imagery with AI object detection to create a comprehensive pollution monitoring platform, addressing challenges of non-point source pollution.

Product

K-AQUAS (Korea Automated Quality and Utility Analysis System)

Function and Usage

DroMii unifies pollution visualization using AI and data fusion for mapping and 3D visualization. K-AQUAS automatically identifies priority zones with high accuracy (>95% for land cover). It has Global Expansion efforts and proven Traction with K-Water.

Marketing and Selling points

K-AQUAS is a cloud-based platform for non-point pollution monitoring. It provides AI-generated land-cover maps and 3D visualization. Revenue is generated via B2G government platforms, B2B SaaS, and cloud licensing. (<http://k-aquas.dromii.com/>)

D-ROAD (Drone-based Road Observation and Anomaly Detection)

Function and Usage

D-ROAD uses drone imagery and AI with our CfSM (Car-free Street Mapping) to generate clean road maps and detect potholes, cracks, FOD (foreign object debris), and road facility damage. Results are delivered through a dashboard with location-based insights, improving inspection efficiency, reducing manual surveys, and enabling scalable monitoring for highway and public road operators.

Marketing and Selling points

D-ROAD is a drone-and-AI road inspection platform powered by CfSM for clean, car-free base maps. It detects potholes, cracks, FOD, and facility damage with geotagged insights via a dashboard. Monetization: B2G road agencies, B2B SaaS, and enterprise licensing.
