Company Description

XITST builds human state intelligence that detects risk early from face, voice, and vital signals. In just seconds, our non-intrusive AI helps organizations make better decisions across healthcare, workforce, safety, and mobility—preventing problems before they surface while respecting privacy and real-world operations with scalable platforms for global partners and deployments.

Product

Vcare

Function and Usage

Vcare is a non-intrusive AI solution that measures human vital and stress signals from facial video in seconds. It enables real-time risk detection, daily health checks, and condition monitoring without wearables, supporting healthcare facilities, workplaces, and safety-critical environments through simple camera-based deployment for scalable, privacy-first, enterprise and public sector operations.

Marketing and Selling points

Vcare delivers fast, scalable human risk intelligence without wearables or behavioral burden. Its five-second measurement, privacy-first design, and camera-only deployment cut operational costs while improving safety outcomes. Proven in large facilities, Vcare supports early intervention, workforce protection, and accident prevention across healthcare, mobility, and industrial markets, enabling partners to reduce risk proactively and efficiently through global deployments and flexible integrations.
